

Some things to think about...

- What is the product made from?
- Where do these materials come from?
- Which are finite resources (things that will run out one day)? Does it matter if they run out?
- Where is the processing done?
- Identify where workers may have low wages and poor conditions.
- Identify any health issues with this product. Is it good or bad for the consumer?
- Identify where pollution is caused during the lifecycle of this product.
- Are there any aesthetic, social or cultural impacts related to the production, use and disposal of the product?
- What are the political implications of making, using and disposing of this product?
