Planning Future Cornwall

Settlements: Hierarchy and Settlement Categories 2012 Update

January 2013

Settlements: Hierarchy and Settlement Categories: 2012 Update

Summary

A methodology is proposed to:

- Assist the authority in 'ranking' all settlements/clusters of settlements in a sustainability matrix (a hierarchy); and then
- Use this sustainability matrix to allocate settlements/clusters of settlements to a category. This category can then be used to give an initial indication of the level of growth that is appropriate for each settlement before constraints and characteristics are considered.

A number of categories are proposed as set out below and settlements assigned to each depending on their 'score' in the sustainability matrix:

- Category A – identified as the strategically significant towns in Cornwall, and are the main employment and service centres;
- Category B – identified as market and coastal towns that are locally significant and contain a good range of housing, employment, and community facilities and services;
- Category C – identified as small towns and villages that meet local needs for some services and facilities and employment;
- Category D – smaller settlements that perform an important role in their local areas, i.e. 'rural service centres';
- Category E – those settlements that do not meet the criteria for category D but are considered important in their immediate local area and contain a primary school or general store;
- Category F – those settlements that do not meet the criteria for category E but contain a travel to work bus or rail service and either a general store or a meeting place.

A number of changes have been identified between the surveys of 2009 and 2012 and this has resulted in some settlements changing category. This is usually due to a) better information being provided on facilities in a settlement which often results in a settlement moving up a category, b) a gain in facilities if the settlement has moved up a category or c) the loss of facilities in a settlement if the settlement has moved down a category.

A number of key messages and issues were drawn out from this element of the evidence base, and these are summarised below:

- Robust evidence on community facilities and services, appropriately weighted, can be used in determining a settlement hierarchy that is based on functionality and not dependent on population size.
- This evidence must be kept up to date and under regular review.
- Categories of settlements can be used to determine a level of growth appropriate to individual or clusters of settlements, but cannot prescribe a set level for each settlement within a category as settlement characteristics and constraints also need to be considered.
- This process describes each settlement as they are at this point in time – it does not take into account what they could become in the future – they could lose or gain services for many reasons that are outside of the control of spatial planning policy. Some settlements could acquire additional services if development is effectively planned.

Purpose and Role of the Evidence Base

This is one in a series of papers dealing with a specific evidence base project. Developing the evidence base is central to the preparation of Development Plan Documents (DPD) within the Cornwall Local Plan, and this evidence base underpins the generation and testing of options. Establishing an appropriate evidence base is central to developing a justifiable plan.

The National Planning Policy Framework¹ makes it clear that *'each local planning authority should ensure that the Local Plan is based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area'*. This document adds that at examination, an independent inspector will assess whether a plan is considered sound, and one of the key elements in testing soundness is that the plan can be justified. That is, *'the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence'*.

The first document to be produced will be the Cornwall Local Plan: Strategic Policies, which will provide a long-term spatial vision for the area, as well as an overall development strategy, indicating where future development should be directed. As part of this process, settlements in Cornwall will be analysed in terms of their current level of community facilities and hence their potential future ability to accommodate new housing, employment and associated infrastructure.

This paper sets out how the evidence base relating to a settlement hierarchy was prepared and identifies how this can inform the issues that need to be addressed in the Cornwall Local Plan, and in particular which settlements are the most sustainable in terms of the level of facilities available. Other evidence base background papers and reports available in this series include:

- Community Facilities & Services Survey: 2012 Update (this paper describes the methodology and evidence used to understand community facilities in settlements – and is directly related to this paper)
- Population and Household Change in Cornwall
- Housing Growth & Distribution: Housing Growth Submission Version
- Housing Growth & Distribution: Housing Distribution Submission Version
- Planning for the role and future of smaller settlements in Cornwall.

Why should we Analyse Settlement?

Analysing settlements will help plan for the future of places in Cornwall. Locating new development, whether for housing, employment or any other land use is perhaps the most difficult part of planning for the future. Urban change and the loss of green field land to new development will create debate and disagreement about the choices which must be made. It is certain that Cornwall must accommodate new housing and employment development, supported in terms of community infrastructure, to meet the needs of communities in the area now and in the future.

A key principle underpinning planning policy is the need to create, support and promote sustainable communities. One of the main dimensions of sustainability is to locate housing, employment and services closely together. In addition to reducing the need to travel (and consequently carbon emissions) this approach helps to promote the viability of local services and community facilities.

¹ DCLG (2012) National Planning Policy Framework - <http://www.communities.gov.uk/publications/planningandbuilding/nppf>

Why do we need a Hierarchy of Settlements?

A hierarchy of settlements will help determine the level of growth that will be allocated across Cornwall. This paper outlines how a hierarchy has been reached. The proposed hierarchy is based on the number of key facilities and services available in settlements, as well as information on employment and travel to work. This is in keeping with the 'functional' approach to planning whereby it is the role and function of a settlement that will determine its position in a hierarchy and not just its population size. Many smaller settlements in Cornwall in terms of their population contain more services and facilities than would be expected and provide a vital role in their local areas. Camelford is a good example of this – it has a relatively small population of about 2,500 but has a range of facilities and services that are more likely to be found in larger market towns.

Why do we need Settlement Categories?

Categorising settlements will help determine the level of growth that will be allocated across Cornwall. This paper outlines a range of categories that can be used to determine how much growth settlements in Cornwall could accommodate based on their position in the hierarchy.

Settlements in Cornwall

There are many hundreds of settlements in Cornwall, ranging from those that are strategically significant such as Truro, through small towns and local centres to the smallest of villages and hamlets. There is no formal definition of what a small settlement is in planning terms, so it is not possible to give an exact number of settlements for Cornwall. The original 2009 community facilities and services survey looked at some 330 settlements that were identified in the ex District Local Plans.

We know that many of Cornwall's towns and villages are probably well-placed to meet the challenges of the next few decades because they are already relatively self-sustaining and contain strong communities. Truro, Camborne/Pool/Illogan/Redruth, Falmouth/Penryn, Penzance/Newlyn, St Austell, Newquay, and Bodmin (settlement category² A) are regarded as of strategic importance in Cornwall, and contain a wide range of community facilities and services that serve their own and surrounding areas populations. Other important towns (settlement category B) are identified as Bude/Stratton/Flexbury/Poughill, Hayle, Helston, Launceston, Liskeard, Saltash, St Ives/Carbis Bay and Wadebridge.

We are particularly interested in 2012 in what has happened in the smaller towns and larger villages. Settlement categories A and B had been assigned to the main towns in Cornwall in 2009³, and although facilities and services may have been lost in these locations, it is unlikely that any changes will impact on the overall sustainability of these types of settlements. However, the loss of just one facility in a smaller settlement can have a significant impact on its sustainability. Therefore the 2012 Community Facilities & Services Survey⁴ concentrated on settlement categories C, D and E particularly, as it is these types of settlements that will probably need to

accommodate some growth – and it is important that we have up to date information on their current sustainability. Development in settlements that fall into categories ‘F’ and ‘Other’ will be allowed only where it can be shown that it meets a local need for homes and/or employment space.

Relevant Policy Context

The Government has set a clear policy agenda that in the future communities need to be sustainable, and the National Planning Policy Framework⁵ acknowledges that the ‘*purpose of the planning system is to contribute to the achievement of sustainable development*’.

Being sustainable also means living within environmental limits, the most obvious of which is the need to limit greenhouse gas emissions. This means that in future we have to plan for communities which use less energy, need to use their cars less, and can cope with the impacts of climate change, whilst maintaining a good quality of life. The Cornwall Local Plan aims to do this by encouraging a close proximity of housing, jobs and services, therefore reducing the need to travel, especially by private car. These themes are at the core of the Sustainable Community Strategy for Cornwall.

The National Planning Policy Framework⁶ is also clear that to ‘promote a strong rural economy, local and neighbourhood plans should...promote the retention and development of local services and community facilities in villages, such as local shops, meeting places, sports venues, cultural buildings, public houses and places of worship.’

Methodology: Hierarchy

The Cornwall Local Plan will shape and direct Cornwall’s development up to 2030, and will be based on an assessment of the functional relationships between places. This functional approach, which is based on how people interact with businesses, services and facilities, requires an in-depth assessment of where people live, work, go to school, shop, bank and use leisure facilities. Information was collated for settlements from a range of sources on key facilities and services – see the evidence base background paper on ‘Community Facilities & Services Survey’⁷ and ‘Community Facilities & Services Survey: 2012 Update’⁸ for more information.

The services and facilities chosen for this purpose are taken from the above list, but it was considered sensible to ‘weight’ those that are considered necessary to meet residents’ day to day needs higher than those that are ‘nice to have but not essential’. Three different levels of ‘scoring’ were identified in order that those services and facilities that are essential to everyday life are scored higher than those that are used less frequently:

- High – services and facilities that people need to use on a regular basis that are essential to everyday life and which a sustainable settlement should contain: supermarket/food store, primary school, doctors’ surgery, good broadband

⁵ DCLG (2012) National Planning Policy Framework - <http://www.communities.gov.uk/publications/planningandbuilding/nppf>

⁷ Cornwall Council (2011) Community Facilities & Services Survey - <http://www.cornwall.gov.uk/Default.aspx?page=32790>

⁸ Cornwall Council (2012) Community Facilities & Service Survey: 2012 Update - <http://www.cornwall.gov.uk/Default.aspx?page=32813>

connection, travel to work bus/rail service, and a high work self containment (i.e. the proportion of the resident population employed locally).

- Medium – services and facilities that people would only expect to be available in larger settlements or those that are not needed on a day to day basis: secondary school, bank/building society, post office, pre-school provision, chemist/pharmacy, pub/social club, petrol filling station, community hall, leisure centre/swimming pool, formal sports area/playing pitch, children's equipped play area.
- Low – these are services and facilities that are either so strategic that people would expect to travel a considerable distance to access them or that they are 'nice to have' but not essential – some of these services however may be very important in settlements with few other facilities: hospital, permanent library, mobile library, place of worship, other bus/rail service (not travel to work).

Weighting is also used in relation to facilities if:

- There is more than one unit of a key facility in a settlement - additional facilities would score but not as highly as the first one counted – e.g. the first of a facility could score 4 but each additional facility of the same type would score 2.
- Some facilities are full time and some part time and scores would be allocated to reflect this – e.g. a full time doctors' surgery could score 4 and a part time surgery could score 2.
- Some facilities are combined with others and scores should reflect this – e.g. post offices and general stores are often combined – individually they would score 4 each but the score would be reduced to reflect the combination and would score 2 each.

See appendix 1 for a table on how facilities and services score in the sustainability analysis.

Using the above methodology a comprehensive settlement sustainability analysis was carried out to identify where each settlement/cluster of settlements would 'score' in the hierarchy. See appendix 2 for this 'sustainability matrix'.

Facilities and services in settlements are subject to change over time, and while every effort has been made to ensure the data is up to date, there may need to be some adjustment made in the future. The 'Community Facilities & Services Survey' evidence base papers and related 'Settlement Profiles'⁹ contain a list of the facilities and services available in each settlement at a specific point in time.

Methodology: Categories

There are a huge number of settlements in Cornwall of varying sizes and functionality. It was considered sensible to use a scoring system to determine the functionality of a settlement (rather than its size in terms of population) and group similar settlements into the same category. The settlements within each proposed category are listed by their score so that it is easy to see which settlements are on the 'cusp' between categories.

Category A: These are identified as the strategically significant towns in Cornwall, and are the main employment and service centres for the County. In the sustainability matrix in Appendix 2, category A settlements are those that score more than 190 points.

Category A settlements are:

⁹ Cornwall Council (2012) Settlement Profiles - <http://www.cornwall.gov.uk/Default.aspx?page=24898>

A Category Settlements

- Camborne with Pool, Illogan and Redruth;
- Falmouth with Penryn;
- Penzance;
- St Austell;
- Truro with Threemilestone;
- Newquay;
- Bodmin

Category B: These are identified as market and coastal towns that are locally significant and contain a good range of housing, employment, and community facilities and services. In the sustainability matrix in Appendix 2, category B settlements are those that score 120 points or more but less than 191. Category B settlements are:

B Category Settlements

- Launceston;
- Bude with Stratton, Flexbury and Poughill;
- Helston;
- St Ives with Carbis Bay;
- Saltash
- Hayle;
- Liskeard;
- Wadebridge.

Category C: These are identified as small towns and villages that meet local needs for some services and facilities. In the sustainability matrix in Appendix 2, category C settlements are those that score 50 points or more but less than 120. Category C settlements are:

C Category Settlements

---	--

Category D: There are smaller settlements that perform an important role in their local areas, i.e. 'rural service centres'. In the sustainability matrix in Appendix 2, category D settlements are those that score 29 points or more but less than 50, and include both a primary school and a general store. Category D settlements are:

D Category Settlements	
<ul style="list-style-type: none"> • St Erth; • Probus; • Bugle; • Menheniot; • Albaston with Drakewalls & St Anns Chapel; • Millbrook; • Crowlas with Lower Ludgvan; • Grampound; • Stoke Climsland with Venterdon; • Pensilva; • Sennen; • Pelynt; • Cubert; • Perranwell with Perranarworthal; • St Tudy; • Tywardreath; • Grampound Road; • Dobwalls; • St Eval; • Goonhavern; • St Mawgan; • Calstock; 	<ul style="list-style-type: none"> • Troon; • St Mawes; • Four Lanes; • St Newlyn East; • Gorran Haven with Churchtown; • Polperro; • St Keverne; • St Germans; • Lanivet with Lamorrack; • Port Isaac with Port Gaverne; • St Buryan; • Lizard; • St Teath; • Trispen; • Donderry; • Veryan; • Foxhole; • St Dominic; • Connor Downs; • Ponsanooth; • Luxulyan; • Goldsithney with St Hilary;

--	---

Other Settlements: There are many other settlements in Cornwall that fall outside of the above categories and some of these may perform an important role in their areas. There are those settlements that score as highly as those in category D but do not currently contain both a primary school and general store (although they may contain one of these facilities) such as Polperro, Chacewater, and St Kew Highway. There are those settlements that score slightly lower in the sustainability matrix but contain a primary school or general store such as Egloskerry, Newtown St Martin, and Widegates. We will need to consider what is the best way to deal with these settlements and may want to introduce a category E and a category F.

Category E: In the sustainability matrix in Appendix 2, category E settlements are those that score 29 points or more but less than 50, and include either a primary school or a general store, and those settlements that score less than 29 but do include a primary school. Category E would contain all those settlements that are considered important in their immediate local area and some new development would be considered appropriate to meet local needs and support local services and facilities. Category E settlements are:

E Category Settlements	
<ul style="list-style-type: none"> • Chacewater; • Devoran; • St Issey; • Tregadillett; • Shop (Morwenstow); • Gweek; • Porthtowan; • St Cleer; • Gulval with Trevarrack; • Carharrack; • Praze an Beeble; • St Just in Roseland; 	<ul style="list-style-type: none"> • Crantock; • Marhamchurch; • St Kew Highway; • Blackwater; • Tresillian; • Quintrell Downs; • Harrowbarrow; • Breage; • Polzeath with Trebetherick; • Landrake; • Long Rock; • Carnon Downs;

--	--

Category F: In the sustainability matrix in appendix 2, category F settlements are those that contain a travel to work bus or rail service and either a general store or a meeting place (hall or pub). Category F settlements are:

F Category Settlements	
<ul style="list-style-type: none"> • Tranance with Mawgan Porth; • Frogpool; • Tideford; • Widemouth Bay; • Budock Water; • Paul with Sheffield; • Wainhouse Corner; • Scorrier; • Rame; • Ashton; • Tresparrett; • Newtown St Martin; 	<ul style="list-style-type: none"> • Lelant; • Sticker; • Feock; • Pentewan; • Carnkie; • Polgooth; • St Ive Cross; • Praa Sands; • Penwithick; • Kelly Bray; • Holywell Bay; • Barripper;

<ul style="list-style-type: none"> • Gwennap; • Treburley; • Mitchell; • St Keyne; • Little Petherick; • Townshend; • Metherell; • Tregurrian with Watergate Bay; • Bridge; • Commonmoor; • Cremyll; 	<ul style="list-style-type: none"> • Treviscoe; • Hessenford; • Portloe; • Crow's Nest & Darite; • Longdowns; • Eastern Green; • Polbathic; • Zelah; • Carleen; • Bolingey; • London Apprentice.
---	---

Any other previously designated settlements, other villages and hamlets, and single dwellings will attract policies appropriate to their status in their area.

Changes between the 2009 and 2012 Surveys

A number of changes have been identified between the surveys of 2009 and 2012 and this has resulted in some settlements changing category. This is usually due to a) better information being provided on facilities in a settlement, b) a gain in facilities if the settlement has moved up a category or c) the loss of facilities in a settlement if the settlement has moved down a category.

Those settlements that have moved up a category (mainly as a result of better information being made available) are identified as:

- Roche (D to C);
- St Day (D to C);
- Mount Hawke (D to C);
- Kingsand with Cawsand (D to C);
- Stithians (D to C);
- St Breward (D to C);
- Lanner (D to C);
- Mawnan Smith (E to C);
- Pendeen (D to C);
- Mylor (D to C);
- Tregony (D to C);
- Polperro (E to D);
- St Germans (E to D);
- Grampound Road (E to D);
- Ponsanooth (E to D);
- Whitstone (E to D);
- Mawgan & Garras (E to D);
- Tresillian (F to E);
- Carnon Downs (F to E);
- Playing Place (F to E);
- Carnhell Green with Wall & Realwa (F to E);
- Crafhole (O to E);
- Rosudgeon (F to E);
- Widemouth Bay (O to F).

Those settlements that have moved down a category (mainly as a result of loss of facilities) are identified as:

- Marhamchurch (D to E);
- Shop (Morwenstow) (D to E);
- Long Rock (D to E);
- Antony (F to O).

The Category a Settlement falls into and implications for Development

It should be noted that the hierarchy of settlements is not intended to be prescriptive and that the expectations in terms of development and growth are not necessarily identical for settlements under each category. Local characteristics and constraints – e.g. landscape designations or flood risk – will be vital considerations in determining future levels and types of growth.

Given the above caveat, the higher the category a settlement falls into the more new development it could be allocated. Settlements that fall into the 'A' and 'B' categories could be allocated a significant proportion of the adopted housing growth target as these are the settlements that contain the highest level of facilities, the majority of employment opportunities, and so on, and this is a requirement of current Government guidance. Category 'C', 'D' and some 'E' settlements are all important to their local areas and are likely to be allocated an appropriate level of growth to meet local needs for housing and employment, and to help support existing services and facilities. Some Category 'E' and Category 'F' settlements provide good travel to work transport links to nearby larger settlements and contain some community facilities, and could therefore be considered as appropriate locations for development.

Information on how new development will be distributed across Cornwall is discussed further in the evidence base background paper 'Housing Growth & Distribution: Housing Distribution Submission Version'¹⁰.

Clustering: The study 'Planning for the role and future of smaller settlements in Cornwall'¹¹ introduces the idea of 'clusters' of settlements, and this is explored further in the 'Small Settlements Study'¹². This 'clustering of settlements' proposes that instead of looking at settlements individually we could look at how a group of settlements 'functions' in a similar way to a much larger settlement. In the same way that neighbourhoods make up a town, a group of smaller settlements could have a similar range of employment, services and facilities as a larger settlement - they just may be slightly further apart. Identifying a group of settlements as a 'cluster' provides this 'cluster' with opportunities in terms of new development, improved public transport and walking and cycling routes and so forth, and these will be of benefit to the communities in all of the cluster settlements.

Some work has already been done on identifying clusters of settlements, but more work needs to be carried out. There are some already in existence such as Truro with Threemilestone and Altarnun with Five Lanes, etc. The outcomes of this additional work could then be used to re-evaluate a 'cluster settlements' position in the hierarchy and may change the category to which the cluster belongs. For example, individually, settlement 1 and 2 fall within category D and settlements 3, 4 and 5 fall

¹⁰ Cornwall Council (2012) Housing Growth & Distribution: Housing Distribution Submission Version – <http://www.cornwall.gov.uk/Default.aspx?page=32813>

¹¹ C4G/Roger Tym & Partners/Rural Innovation (2009) Planning for the role and future of smaller settlements in Cornwall - <http://www.cornwall.gov.uk/Default.aspx?page=32790>

¹² URS Scott Wilson (2011) Cornwall Council Small Settlements Study: applicability and deliverability - <http://www.cornwall.gov.uk/Default.aspx?page=32791>

within the proposed category E – taken together as a ‘cluster settlement’ they have the range of services that suggests they collectively fall within category C, and collectively could attract the type of development and associated infrastructure that is appropriate for category C settlements.

Gaps or Limitations in Evidence

- Additional and up-to-date data on the availability of employment in settlements and employment containment could improve the sustainability matrix – options for this can be explored once detailed Census 2011 information is made available (likely to be in 2013).
- Information on key facilities and services can quickly be out of date as some facilities are particularly vulnerable in a poor economic climate such as we are experiencing at this time. This will impact on where a settlement lies in the hierarchy and the category it is attached too.
- The hierarchy and category describe settlements as they are now and do not take into account what they could be in the future.
- Additional work is proposed as a follow on to identify clusters of settlements. This will have an impact on where a grouping of settlements will fall in the hierarchy and hence the category attached to them.

Key Messages for Spatial Planning Policy

A number of key messages and issues were drawn out from this element of the evidence base, and these are summarised below:

- Robust evidence on community facilities and services, appropriately weighted, can be effectively used in determining a settlement hierarchy that is not dependent on population size.
- This evidence must be kept up to date and under regular review.
- Settlement categories can be used to determine a level of growth appropriate to individual or clusters of settlements, but cannot prescribe a set level for each settlement within a category as settlement characteristics and constraints need to be considered.
- This process describes settlement as they are at this point in time – it does not take into account what they could become in the future – they could lose services for many reasons that are outside of the control of spatial planning policy. Some settlements could acquire additional services if development is effectively planned.

SWOT Analysis

Strengths	Weaknesses
<ul style="list-style-type: none"> • Consistent and transparent way of scoring settlements in a hierarchy • Consistent and transparent way of allocating settlements to a category based on the level of facilities and services available to residents. 	<ul style="list-style-type: none"> • Information on key services and facilities can quickly be out of date, particularly for the more vulnerable of facilities. • Not all settlements were included in the 2012 update (categories A, B, F and others). • Not all information on settlements surveyed (categories C, D and E) was validated (varying response rate).
Opportunities	Threats
<ul style="list-style-type: none"> • Real opportunity to treat all settlement across Cornwall in a consistent fashion. • Appropriate monitoring systems can be set up to keep information up to date. 	<ul style="list-style-type: none"> • Time and resources needed to keep information on facilities and services up to date. • If not regularly updated, stakeholders will lose faith in the robustness of data. • Policy based on this evidence open to criticism if information is proven to be out of date.

This paper summarises the evidence on a settlement hierarchy and category to inform the Cornwall Local Plan. However, it will be added to and kept up-to-date as other relevant evidence becomes available. In updating these papers all previous versions will be archived to ensure it is clear what evidence was available at each stage.

Appendix 1

Facility	First Score	Additional Facility Score	Part Time/Combinations
Food Shop	4	2	2 (2 if combined with post office, petrol filling station, etc)
Post Office	3	1.5	1.5 (1.5 if combined with food store, etc)
Bank	3	1.5	1.5
